[fabien.nony@cea.fr](mailto:fabien.nony@cea.fr)

**Keywords:** hydrogen storage, compressed, gaseous, hydrides, cryogenic, composite, pressure, vessel

This presentation will first provide a snapshot of the on-going activities in the field including some research or demonstration programs, technological achievements, hot R&D topics along with some of the remaining limitations or bottlenecks. Examples from past and/or current projects like H<sub>2</sub>E (FR-Bpi), COPERNIC (FCH-JU) and HYPACTOR (FCH-JU) will be highlighted.

Then specific perspectives will be presented and discussed to tackle the most expected issues.

### Acknowledgements

Fuel Cell and Hydrogen Joint Technology Initiative (FCH JU) for their support under GA325330 (COPERNIC) and GA621194 (HYPACTOR).

BPi FRANCE for their support in the Horizon Hydrogen Energy (H<sub>2</sub>E) Program.

Authors thank all their contributing partners AIR LIQUIDE, ANLEG, HEXAGON, H2LOGIC, INSTITUT DE SOUDURE, NORWEGIAN UNIVERSITY OF SCIENCE AND TECHNOLOGY, RAIGI, SSA, STELIA COMPOSITES, SYMBIO FUELCELL, WROCLAW UNIVERSITY OF TECHNOLOGY
